My talking angela app

BlackBerry talks with Instagram and Netflix about bringing apps to its BlackBerry 10 platform. BB10 launched with 70,000 apps and managed to get some big names on board from the start - Skype, Kindle, Whatsapp are just some of the apps that are now or soon available on the BlackBerry World market. However, Instagram and Netflix have been two painful omissions, and the news that BlackBerry is negotiating to get them is definitely welcome. However, The Verge has seen Instagram run on the Z10 and it looks like it works with a custom running for Android apps, which means that the app is not original. Based on the data seen so far, The BlackBerry 10 supports Android apps through this runtime environment, but the performance is far from perfect. The real question seems to be whether Instagram and Netflix are developing native apps that offer a real BB10 experience.Source:The Verge SUBSCRIBE to OUR NEWSLETTER! In this project, you will learn how to download an app on your iPhone that speaks directly to the third generation particle mesh disk. It'll take less than 20 minutes of your time. In addition, you can start tinkering right away!! Let's start. The things you needParticle Mesh (Xenon, Argon, Boron) board Newer iPad or iPhone. (So much for that!) Getting settings Getting to the settings is the hardest part. If you like the video, check out the above. Otherwise, follow this step-by-step guide. :)End the RGB firmware code on your computer clone git@github.com:jaredwolff/particle-bluetooth-rgb.gitAdd the app sample code on your computer as well as the wellgit clone git@github.com:jaredwolff/swift-bluetooth-particle-rgb.git The fastest way to start is to translate and download locally. Connect the particle device to USBClick in the ble-rgb-control.ino menu Select the particle device in the lower right corner. (In this example, I use akсенon) Select deviceOS version 1.3.0-rc.1 in the same range. Set the device to DFU mode. Here are some handy ways to do it without touching any buttons on the network diskFor Mac (tested)/Linux (untested)stty -f /dev/tty.usbserial1234 14400For PC:mode COMx 14400(x is automatically assigned port number)When you run the command, you may notice the device flashing yellow! Good stuff! COMMAND + Shift + P and then select the Flash app (local)!Note: If you are not sure which version is on your device, it is best to do CloudFlash instead of flash (local). This will also update your operating system in the process. Open the project in XcodePlug and select the Pressure Game on your device to download its Probiems? Learn about the troubleshooting step. At this point, the firmware must be downloaded to your device. The app will be downloaded to your phone. You can look at the code and see how things were related. If you are interested in all the details, you can check my step-by-step message troubleshooting steps also there: This is a preview of the content of my upcoming Ultimate Guide to Particle Mesh. You can subscribe to my catalog for more information, exclusive content and discount when it becomes available here: check this project out. If you enjoy it, consider pressing the button on your heart. It really helps me. ♥ have you talked yet? Actress Angela Bassett urges families to discuss long-term care. The star team of well-known personalities are lending their celebrity status and stories to a campaign to encourage more people to plan their long-term care needs. Genworth recently put through a public service announcement featuring Angela Bassettin, celebrities talking about their own health challenges and the ones their loved ones faced as they got older. The message behind the Talk Now campaign is to break the ice on unpleasant topics of ageing and long-term care. Read more: Do you feel younger than your age? You May Just Live Longer » Long-term care is different from regular healthcare. It involves making sure that you are able to do everyday tasks. Being in a nursing home is a form of long-term care. Such a round treatment can cost up to \$87,000 a year. Home care is a different type of long-term care that allows people to stay in their homes. About seven out of 10 Americans need long-term care after the age of 65. Every day in 2030, 10,000 boomers reach the age of 65. And more than 90 percent of American adults do not have long-term care insurance to cover some of these treatment costs. Read more: The People Careing for Your Parents Live in Poverty » Bassett, known for her roles in American Horror Story and Olympus Has Fallen, joined the campaign because she has experienced her own challenges in planning long-term care. Her mother wanted to go to an assisted living center when her health began to fail. Bassett said his family had to make important decisions about his care and end-of-life wishes. Although they had talked about some of these topics when her mother was doing well, it was not as easy to discuss choices when her mother's health fell. The Emmy-nominated actress, who recently directed Whitney Houston's lifetime biopire called Whitney, said she found it difficult to chat. Bassett said he was glad he could help financially with his mother's long-term care, but wishes the process had gone a little smoother. In June, Bassett's mother died. It's not the only close tie Bassett has to look after an aging adult. About three years ago, her mother-in-law was diagnosed with ALS, or Lou Gehrig's disease. Her family has had to discuss her mother-in-law's long-term care Especially when he doesn't want to be put on. put it on. care home and wants to remain independent. Her mother-in-law is more open and receptive to conversations, Bassett said. You have to let them age the way they want them to, Bassett said in an interview with Healthline. You let them lead. Bassett advocates talking to loved ones instead of making plans for them. Now Bassett, 56, says he wants to inspire others to talk about long-term care with loved ones. She has spoken to her husband and has also opened a dialogue with her single sister. Bassett said even those in their 30s and 40s should start talking about what they want as they age and make regulations if it includes long-term care. This can mean arranging home care if they fall ill or are unable to carry out daily tasks or go to a treatment centre. It also means creating a will or other ex ante directive. And that could mean taking out long-term care insurance. Through this video, we hope that the persuasive words of Angela, Jim, Maggie, Maria, Rob and Zachary will encourage Americans to take the initiative to speak out and put in place a long-term care plan, said Genworth CEO Tom McInerney. That's where the simulation technology comes in. Seed planting. It's a simple first step. Caring for the rest of life: Find out who's doing it right » In the U.S., more than 12 million children and guys are fat. But few medical schools across the country teach doctors how to take the weight management issue with patients and their families, leaving them unprepared. That's where the simulation technology comes in. Change Talk 2.0, a role-playing game developed by app maker Kognto and , is intended to help doctors practice these sensitive conversations. After downloading the app, doctors and medical students make a hypothetical clinical scenario, ask a question, and then receive feedback from the virtual family about the interaction. The newly released second version of the app doesn't just focus on childhood obesity; it also includes scenarios related to breastfeeding and healthy snack habits. The first version of the app, released in 2014, had about 30,000 users. It has shown some success in training doctors in trainer training, although it remains to be seen whether patients will thrive in the long term. A case study by the American Academy of Pediatrics found that 93% of doctors surveyed planned to make a change to provide better health care after using the simulation. After a month of follow-up, 88% made the reported changes. Apps like Change Talk 2.0 suggest that more advanced technologies such as virtual reality can be used in healthcare. It is still early days, but many in the medical field see the potential that VR can be used to help doctors practice their surgical techniques to refine their place of night before interacting with the right patients. We're trying to meet the family. Family, they are more than prescriptive, says Christopher Bolling, a pediatrician who helped invent the app with fellow doctors and nutritionists. According to Bolling, users are rewarded for asking open questions to assess what problems a family may have, whether it's lack of exercise or too many sugary drinks at home. This technique is called motivational interviewing. Change Talk 2.0 may not be as sophisticated as virtual reality, he explains, but it's effective at training doctors because they built it. Paediatrician and entrepreneur Jay Parkinson, who was not involved in making the app, says the most important criteria are the user experience — not just whether doctors have developed it. If the app has a decent interface, it's going to be powerful, he says. But Parkinson also warns that some doctors are simply less emphatic than others, and a decent place to stay cannot always be learned through the app.
